I. SAFETY ALERT SYMBOL

The symbol shown below is used to call your attention to instructions concerning your personal safety and the safety of others. Watch for this symbol. It points out important safety precautions and procedures. It means **ATTENTION! Become Alert! Your personal safety is at risk!** Read the message that follows and be alert to the risk of personal injury or death.

II. SAFETY FIRST

The information in this manual is essential for safe installation and service of your Cretors popcorn machine. The manual must be read and understood before installing, or maintaining equipment, or equivalent training must be provided.

"The employer must instruct each employee in the recognition and avoidance of unsafe conditions, regulations applicable to his work environment to control and eliminate any hazards or other exposure to illness or injury". Ref.: 29 CFR 1926.20 (b)(4)(a)(2)

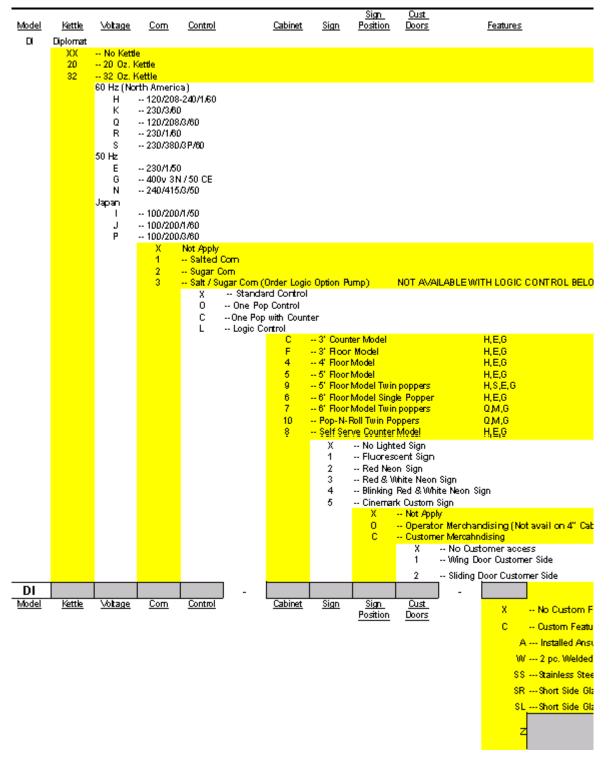

It is understood that safety rules within individual companies vary. If a conflict exists between the safety procedures contained in this manual and the rules of a using company, the more stringent rule should take precedence.

III. INTRODUCTION

This manual is filled with time-saving and money-saving information regarding your Cretors popcorn machine. There is nothing, however, more important than the safety aids and warnings that are found throughout this document. The Safety Alert Symbol is used to identify topics of primary safety concern wherever they appear. A separate section has been included which deals exclusively with operation and accident prevention.

If, after reviewing this manual, anything is unclear or technical problems are encountered, contact the distributor from whom you purchased your machine. For assistance and if there are any additional questions, feel free to contact our Customer Service Department at the address and/or phone number listed on the last page of this manual. Always have the model and serial number of your machine available to assist in obtaining the correct information.

A. Electrical Specifications:

Diplomat Models are available in any of the following electrical configurations:

120/208 - 240 Volt, Single and Three Phase, 60 Hz 230 Volt, Single Phase, 50 Hz 400 Volt, 3N~, Three Phase, 50 Hz

100/200 Volt, Single Phase, 50 or 60 Hz

B. Size Specifications:

Size opecifications.		
MODEL DI20	DIPLOMAT 20 OZ. ELECTRIC COUNTER MODEL	
Capacity:	20 oz. Kettle, 400 one-ounce servings per hour	
Power:	4200 watts	
Dimensions:	28"D x 36"W x 45-1/2" H 71 cm D x 91 cm W x 116 cm H	
Net Weight:	189 lbs. (86 kg.)	
MODEL DI32CP	DIPLOMAT 32 OZ. ELECTRIC COUNTER MODEL	
Capacity:	32 oz. Kettle, 640 one-ounce servings per hour	
Power:	5100 watts	
Dimensions:	28"D x 36"W x 45-1/2" H - - 71 cm D x 91 cm W x 116 cm H	
Net Weight:	189 lbs. (86 kg.)	
MODEL DI20FP	DIPLOMAT 20 OZ. ELECTRIC FLOOR MODEL	
Capacity:	20 oz. Kettle, 400 one-ounce servings per hour	
Power:	4200 watts	
Dimensions:	28"D x 36"W x 74"H 71 cm D x 91 cm W x 188 cm H	
Net Weight:	390 lbs. (177 kg.)	
MODEL DI32FP	DIPLOMAT 32 OZ. ELECTRIC FLOOR MODEL	
Capacity:	32 oz. Kettle, 640 one-ounce servings per hour	
Capacity: Power:	32 oz. Kettle, 640 one-ounce servings per hour 5100 watts	
1 2	01	
Power:	5100 watts

V. PURPOSE OF MANUAL

This instruction manual is intended to familiarize owners with the servicing and safety procedures associated with your Cretors popcorn machine.

This manual should be kept available to maintenance personnel.

VI. INSTALLATION INSTRUCTIONS

A. Location

Choose a location for your Cretors popcorn machine that maximizes the ease of operation and maintenance procedures. Be sure to check your local building and fire codes for location restrictions.

B. Power Supply

1. Check the nameplate to determine the required power supply.

Connect your popcorn popper only to the correct power source. Failure to do so may result in personal injury or death and may damage your popper.

2. C. Cretors and Company recommends dedicated circuits for the Diplomat model popcorn machine. The Diplomat model poppers require a dedicated circuit to avoid a voltage drop in the supply wiring. Check your local electrical codes regarding fuse or circuit breaker requirements.

Make certain your popcorn machine is properly grounded. Failure to do so may result in damage to your equipment or present a shock hazard.

C. Connecting your Machine to the Power Supply

- 1. Make certain that the power supply circuit breakers are in the off position.
- 2. Push the plug completely into the receptacle. If the cord has a twist lock plug be sure to turn to the lock in position.
- 3. If the supply cord is damaged, a Cretors approved service agent, or a qualified Cretors employee must replace it in order to avoid a hazard.

D. Pump Installation

Refer to the Service Manual included with the pump to be installed in the machine.

E. Counter Model Installation

The Counter Model Diplomats have 4" legs, which must be attached at the time of installation. The legs are required to comply with Sanitation Standards.

VII. SERVICE INSTRUCTIONS

In the case of improper operation, only a qualified person should perform the following diagnostic checks, and, if necessary, corresponding adjustments and repairs. Many of the following procedures may present an electrical shock hazard and can cause serious injury or death.

Perform work only on de-energized circuits. Failure to do so may lead to electrical shock resulting in personal injury or death.

A. Parts

When ordering parts, refer to the parts diagram included with this manual. Always supply the serial number, model number, and voltage of your popcorn machine.

B. Kettle Temperature Control

- 1. THERMOSTAT OPERATION
 - a. The thermostat is installed as a safety device to prevent the overheating of the kettle if the machine is left unattended momentarily while in operation. The kettle indicator light indicates the operation of the thermostat. The indicator light is located either on the support column or on the ceiling of the cabinet near the support column on the 36" Diplomat and on the switch plate or support column for the 60" and 72" Diplomats. The indicator light should stay on for most of the popping cycle. The indicator light will turn off 10-20 seconds before the corn finishes popping and the kettle is dumped. If the indicator light turns off 30 seconds or more before the corn finishes popping, the thermostat is set too low and in need of adjustment. If the indicator light remains on after the corn has finished popping the thermostat is set to high.

CAUTION: If the corn has dried out, it will not finish popping at normal temperatures and the light will go out early. <u>DO NOT ADJUST KETTLE</u> <u>TEMPERATURE BASED ON POOR QUALITY CORN.</u>

If set too high (over 500°F 260°C), the thermostat can cause a serious fire hazard.

"Repair Part Thermostats" are shipped from the factory adjusted to switch off the current to the heating elements when the kettle temperature reaches approximately 410° F (210°C). The factory setting should prove satisfactory for salted corn; however, each thermostat must be checked after installation to confirm correct operation. To adjust the thermostat, perform the following operations:

2. THERMOSTAT ADJUSTMENT

- a. Locate the plugged thermostat adjustment hole on the side of the kettle retainer and remove the plug.
- b. Turn on the kettle heat.
- c. Locate pyrometer over thermostat.

d. Set temperature so that the power to heat elements is cut off at the correct temperature.

KETTLE	SALTED CORN	SUGAR CORN
20 OZ.	420° F. (215° C)	385° F. (193° C)
32 OZ.	420° F. (215° C)	385° F. (193° C)

- e. To adjust thermostat, insert a flat blade screwdriver into the slotted adjustment screw and turn counter-clockwise to raise the temperature or clockwise to lower the temperature.
- f. Do not adjust more than one-quarter turn at a time. One full turn of the adjustment screw equals approximately 110° (43°C) Fahrenheit.

Do not screw the adjusting screw all the way in or out! This will render the thermostat inoperable and the kettle heat will increase to a dangerous level and could possibly cause a "flash fire" if oil is put into the pan.

g. If no pyrometer is available, the thermostat may be adjusted by observing the operation of the indicator light as described in the Thermostat Operation section. Adjust the thermostat so that the kettle heat is turned off 10 to 20 seconds before the corn finishes popping and the kettle is dumped.

Do not adjust the temperature so high that the pan smokes at the end of the popping cycle. If set too high (over 500°F or 260°C), the kettle can become a serious fire hazard.

- h. Your final setting should allow the indicator light to cycle off 10 to 20 seconds prior to dumping the kettle.
- i. Observe two or three cycles of correct operation to be certain everything is working correctly.

C. Kettle Removal

To remove the kettle assembly, perform the following operations:

- 1. Unplug the popcorn machine from the power supply. Make sure the kettle is not hot.
- 2. Remove the retainer patch from around the dump shaft.
- 3. Remove the hex screws on the bottom of the retainer and remove the retainer.
- 4. Disconnect the lead wires from the mica terminal plate.
- 5. Loosen the two square-head setscrews that hold the kettle support plate(s) to the support shaft.

6. Slide the kettle off of the support shaft.

Use proper lifting techniques when removing the kettle assembly to avoid injury to back.

- 7. If wires must be replaced, be sure to use nickel wire supplied by Cretors. Conventional copper or "stove" wire will have a limited life.
- 8. When removing nuts and spacers from the threaded studs on the bottom of the pan, do not wipe off the silver lubricant. Without the lubricant (NEVER SEEZ) the nuts may freeze on the studs and cause the studs to break when the nuts are turned, in an attempt to remove them.

D. Kettle Installation

- 1. When re-assembling the kettle, be sure all nuts and bolts are tight. Check to make sure that all electrical connections are secure. A loose connection can heat up and burn off the wires.
- 2. Check the kettle support bar to be sure that it is level.
- 3. Locate the kettle so that the drive shaft lines up with the blade center, and tighten the bolts on the kettle support plate (plates) that hold the kettle in place.
- 4. Turn on the agitator and dump the kettle. If the drive shaft does not engage and disengages freely, readjust the kettle. Under normal circumstances if the kettle was aligned before it was removed, the only adjustment needed is to slide it in or out along the support shaft until the drive shaft is aligned with the blade center. In severe cases it may be necessary to make further adjustments, see section on Kettle Alignment for instructions.
- 5. When the drive shaft engages and disengages freely, securely tighten the other bolts that are holding the pan.
- 6. Replace the retainer and the retainer patch.

E. Kettle Alignment

- 1. Begin by checking to see if the kettle support bar is level. With the kettle removed, apply slight downward pressure on the dump handle to simulate the weight of the pan. Measure the distance from the top of the bar to the top of the cabinet at both the tip and at the base near the support column. The measurements should be equal to within 1/8 inch (3 mm). This dimension should be approximately 11 and 7/8 inches (30.16 cm).
- 2. If the bar is not level, remove the cover from the support column. Locate the kettle level nut and loosen the setscrews that hold it to the shaft. With the setscrew loose rotate the nut to move the support bar up or down. When level, retighten the setscrews.

3. When the bar is level and properly aligned the agitator drive shaft should be directly above it. If the bar is not under the drive shaft it can be moved to either side by rotating the entire support column. The support column is rotated by loosening the four bolts that attach it to the top of the cabinet. Re-tighten and re-check the alignment.

F. Kettle Return Spring Adjustment

The kettle counter balance return spring holds the kettle in a level position when popping corn. It allows the kettle to be emptied when the handle is pulled down. The fixed end of the spring is held by a hooked plate with four adjustment points. The tension of this spring is adjusted by sliding a small tube over the fixed end of the spring and moving it to a different adjustment point.

G. Replacing Damaged Oil Discharge Tube

If the oil discharge tube, which terminates within the kettle, becomes damaged, the tube can be replaced easily. By using a 9/16 wrench to loosen and remove the bottom piece of the coupling. Pull the damaged tube out and replace it with P/N 1089-1 tube.

Make sure the mitered end of the tube is facing the opposite direction of the stirrer blade rotation. This is so that the unpopped kernels are not forced up into the tube. Tighten up the coupling when finished.

VIII. TROUBLE SHOOTING

PROBLEM	POSSIBLE CAUSE	ACTION
Popping is slow.	Incorrect amount of corn	Refer to the chart located in the
	and oil used.	Operations Manual.
	Kettle indicator light goes	Temperature is set to low. (Refer to
	out more than 30 seconds	Thermostat Adjustment.)
	before the corn finishes	
	popping.	
	Voltage may be low.	Check the voltage at the circuit
		breaker with the kettle heat on.
		Extension cords or inadequate
		wiring will provide full voltage, if
		no load is applied. Once the kettle
		heat and auxiliaries are turned on,
		the voltage may drop 5 to 10 volts.
Indicator light stays on.	One of the elements in a	Use an ammeter to diagnose.
	multi-element pan may have	
	failed.	
		Check the amperage draw of the
		heating elements, by using a
		clamp-on ammeter.
		1. Remove the top of the machine
		by removing the screws that
		hold the top panel and lift the
		top off.
		2. Turn on the kettle heat.
		3. Place the ammeter around the
		lead to the popper kettle as
		listed. The following current
		draws are normal.
		120/208-240V and100/200V machines-black or red
		230V machines-blue or brown
		400V machines-black or brown

Do not adjust the temperature so high that the pan smokes at the end of the popping cycle. If set too high (over 500° F or 260° C), the kettle can become a serious fire hazard.

2. A lead wire has burned of	ff one of the element		instructions.)
terminals due to a loose c	onnection.	2.	Check for short circuits inside
			the kettle.
		3.	If wires must be replaced, be
			sure to use nickel wire
			supplied by Cretors.
			Conventional copper or
			"stove" wire will have limited
			life.
		4.	
			broken, loose, burned or heat
			damaged wires. If there are no
			obvious broken or loose wires
			shorting out on the kettle, the
			elements must be checked.
		5.	Perform a continuity test on
			the elements. It is possible that
			one of the elements has burned
			through the insulation and the
			casing is shorting out directly
			to the kettle bottom.

Continuity Test and Ohms Test

When checking Ohms, make sure that the meter probes are making good contact on the terminals. Remove the nickel buss bars that connect the electrical terminals on the heat elements.

Using a multimeter, check each element between the following points:

Terminal to terminal	below	readings should match chart listed 7. m readings are not close, replace.	
First terminal to element case	grour	Continuity to case from terminal indicates a grounded element; replace. No continuity – functioning properly.	
Second terminal to element case	grour	Continuity to case from terminal indicates a grounded element; replace. No continuity – functioning properly.

32 oz. – 240V elements	2615-C 1808-C 1528-C	1000 Watt – 57.6 Ω 1250 Watt – 46.1 Ω 1500 Watt – <u>38.4 Ω</u> 15.6 Ω (total)	
20 oz 240V elements	1983-C 1447-C	900 Watt - 64.0 Ω 1800 Watt - <u>32.0 Ω</u> 21.3 Ω (total)	

Replace failed heat elements with identical units available from your local dealer or from Cretors. Reassemble and reinstall kettle assembly onto the machine.

Do not attempt electrical repairs on the power supply circuit unless you are qualified to do so. The electrical shock associated with line voltages can cause serious injury or death.

The following procedures are performed with the power on. As with any electrical repairs, there is a shock hazard present.

PROBLEM	POSSIBLE CAUSE	ACTION
Kettle will not heat	The motor, light or any of the other components do not work.	 Check power supply: 1. Is it plugged in? 2. Is the receptacle live? 3. Is the machine plugged into the proper voltage? (Measure with voltmeter and compare to specification on nameplate of machine.)
	Problem is in the machine.	 Check the relay. The Diplomat thermostat uses a relay to control the power to the popper pan heat elements. To check the relay, perform the following operations: 1. To gain access to the relay, remove the top of the machine by removing the screws on the top. 2. Using a voltmeter, check the power to the relay coil, which are the small terminals in the center. 3. With the popper switch on, at room temperature, the thermostat should be calling for heat and providing power to the relay. If the coil reading is not 120 volts, (230 volts on 230V and 400V, 50Hz machines) the problem is in the thermostat. 4. If the coil reading is 120 volts, (230 volts on 230V and 400V machines) check the voltage between the output terminal with wire #1 and the output terminal with wire #3 from the kettle support. If this does not have a reading of 208 or 240 volts, the relay is not functioning and needs to be replaced.

		power, check relay CR2 for
		input and output power. If
		relay CR2 has output power,
		replace relay.
Refer to pump Installation for	additional help.	

This manual is filled with time-saving and money-saving information regarding your Cretors popcorn popper. There is nothing, however, more important than the safety aids and warnings found throughout this document.

If you have any questions, contact your local dealer and if there are any additional questions, feel free to contact the Customer Service Department at C. Cretors and Company.

Additional copies of this manual can be obtained from C. Cretors and Company at the address listed below. Please provide model and serial number when requesting additional copies of this manual. There will be a nominal charge for additional copies.

Cretors guarantees this machine to be free of defects in parts, materials and workmanship for two years. Please take this time to fill out the factory registration card and return it to Cretors to activate your warranty. If you have any questions concerning the Cretors' warranty, please contact your local distributor or the Customer Service Department at C. Cretors and Company.
