

## CLEANING CURTIS AIRPOTS

We recommend a regular and careful inspection of the Curtis airpot to ensure optimum performance. It is important to properly clean the airpot after use to maintain a safe and healthy product.

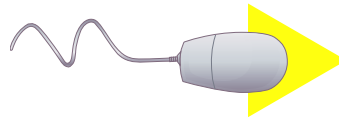

1. Clean the exterior surfaces with a moist soft cloth and wipe dry.
2. Use a mild solution of dishwashing detergent and warm water to clean inside the liner. Scrub with a sponge brush **(A)**.
3. Inspect and clean around the top of liner neck area **(B)**.
4. After cleaning, thoroughly rinse the inside liner and other cleaned parts with hot water.
5. Run warm water through the stopper/spout assembly and dry.

### **⚠ CAUTION**

Do not immerse in water.  
Do not place in dishwasher.  
Do not use harsh powders or cleansers containing chlorine (chlorine could create pits on stainless steel surfaces).
